Digital Lesson Planning Guide

Practical planning resource for secondary-school teachers

1. Start with learning outcomes

• Write what learners should know or be able to do by the end of the lesson.

• Use clear, observable verbs such as identify, explain, compare, demonstrate or calculate.

2. Select appropriate digital tools

• Choose a tool because it supports the learning outcome, not simply because it is available.

• Possible tools include a projector, presentation, educational video, offline PDF, spreadsheet or learning platform.

3. Suggested lesson sequence

• Introduction: connect the topic to prior knowledge and explain the lesson outcomes.

• Development: explain key ideas, demonstrate a process and guide learner practice.

• Learner activity: allow pairs or groups to solve a task or create a short product.

• Assessment: ask questions or use a short exercise to check understanding.

• Conclusion: summarise the main points and give a follow-up task.

4. Accessibility and inclusion

• Use readable fonts, strong contrast and clear instructions.

• Provide printed or offline alternatives where devices or internet access are limited.

• Give learners enough time to engage with digital material.

5. Reflection after teaching

• Record which outcomes were achieved, which learners need support and what should be improved next time.

Teachers should adapt this guide to the subject, learner age, available resources and school policies.
