O-Level Computer Studies: Study Outline

Topic guide for revision • Not an official examination authority syllabus

1. Computer systems

• Meaning of a computer and the information processing cycle: input, processing, output and storage.

• Hardware refers to the physical components of a computer. Software refers to programs and instructions.

• Examples of input devices include keyboard, mouse, scanner and microphone. Output devices include monitor, printer and speakers.

2. Data and information

• Data are raw facts; information is processed data that is meaningful to a user.

• Discuss accuracy, relevance, completeness and timeliness as qualities of useful information.

3. Operating systems and file management

• An operating system manages hardware and provides services for applications.

• Practise creating folders, saving files, renaming files and using clear file names.

4. Word processing and presentations

• Practise entering, editing and formatting text, inserting tables and saving documents.

• Create clear presentation slides with readable text, suitable images and consistent formatting.

5. Networks, internet and digital safety

• A computer network connects devices to share data and resources.

• Use strong passwords, keep personal information private and treat others respectfully online.

6. Suggested practical activities

• Identify common computer components and state their functions.

• Create and format a one-page document.

• Prepare a short presentation on safe internet use.

Important: This document is a locally prepared study outline to demonstrate the portal's resource catalogue. Replace it with the approved syllabus if your lecturer requires the official syllabus.
