Senior Two Chemistry Revision Notes

Introductory revision handout • Masaka District Digital Learning Hub

1. Matter and its states

• Matter is anything that has mass and occupies space.

• The three common states are solid, liquid and gas. Solids have a fixed shape and volume; liquids have a fixed volume but take the shape of their container; gases have neither a fixed shape nor a fixed volume.

• A change of state is a physical change. Examples include melting, freezing, evaporation, condensation and sublimation.

2. Elements, compounds and mixtures

• An element contains one type of atom, for example iron or oxygen.

• A compound contains two or more elements chemically combined in a fixed proportion, for example water.

• A mixture contains substances physically combined and can often be separated by physical methods such as filtration, evaporation or distillation.

3. Laboratory safety

• Wear appropriate protective equipment when instructed.

• Never taste chemicals. Do not smell chemicals directly; use the wafting method only when instructed.

• Read labels carefully and report spills, breakages or injuries to the teacher.

4. Revision questions

• Define matter and give two examples.

• State two differences between a compound and a mixture.

• Name the change of state from liquid to gas.

• Describe one safe practice when handling chemicals.

Learning note: This is an original revision handout for practice. It is not an official Uganda curriculum publication or an examination paper.
